EDUCATION

University of Punjab *Lahore, Pakistan*
Bachelor of Science (BS), Software Engineering | GPA: 3.76/4.0

EXPERIENCE

Userwise *Remote*
Lead Unity Developer | March 2024 – Present

- Direct the end-to-end technical lifecycle for mobile games published with major partners like HalfBrick and PeopleFun.
- Lead and mentor a team of 6+ Unity engineers, establishing code review standards that reduced post-release bug reports by 30%.
- Implement workflow process improvements and reporting design systems to accelerate project delivery and performance enhancements.

Narsun Studios *Lahore, Pakistan*
Senior Unity Developer | February 2022 – March 2024

- Spearheaded core client-side architecture for scalable AAA-style mobile and cross-platform titles.
- Optimized runtime performance, reducing memory footprints by ~35% and maintaining stable 60 FPS across mid-to-low-tier mobile devices.
- Collaborated closely with art, design, and backend teams to establish robust asset pipelines using Addressables and ScriptableObjects.

Invozone *Lahore, Pakistan*
Senior Unity Developer | October 2020 – February 2022

- Architected and deployed 5+ AR/VR and hyper-casual games, optimizing memory usage and frame rates across target mobile platforms.
- Delivered multiple cross-platform AR/VR simulations, establishing asset optimization pipelines for seamless runtime performance.

Geniteam *Lahore, Pakistan*
Senior Unity Developer | February 2019 – October 2020

- Collaborated with cross-functional development teams on large-scale shared Unity codebases.
- Built, debugged, and optimized core 3D gameplay mechanics across multiple mobile titles.

AA'LA Solution *Lahore, Pakistan*
Junior Unity Developer | December 2017 – February 2019

- Developed interactive 3D and Augmented Reality (AR) mobile games using Unity and C#.
- Implemented core game logic, user interfaces, and physics systems from early prototype to production stages.

KEY PROJECTS

Fruit Ninja 2 — Lead Unity Developer

- Architected core gameplay and reward systems; integrated remote configuration and monetization features.
- **Technologies**: Unity, C#, Cursor, Version controlling, Spine
- Fruit Ninja 2 Fun Action Games - Apps on Google Play

Wordscapes Search – PeopleFun — Lead Unity Developer

- Ported codebase from Monkey Engine to Unity Engine; architected dynamic level generation systems fetching backend constraints via REST APIs.
- **Technologies**: Unity, C#, Cursor, Github, Spine, Firebase Remote config, Restful API
- Wordscapes Search: Word Games - Apps on Google Play

Jetpack Joyride — Lead Unity Developer

- Architected core gameplay (Power ups) mechanics, deployed new IAP architecture and monetization schemes.
- **Technologies**: Unity, C#, Cursor, Unity IAP, Particle system, Applovin Mediation
- Jetpack Joyride - Apps on Google Play
- Jetpack Joyride App - App Store

Atomic Golf — Lead Unity Developer

- Developed Flite Range V6, integrating Trackman-driven mini-games and real-time systems, boosting performance to 120+ FPS, and building scalable Addressables-based 3D course architecture.
- **Technologies**: Unity, C#, Web Sockets, PlayFab, Addressables, Trackman
- **Website**: https://atomicgolf.com/
- Demo Video

Chef Qailo — Lead Unity Developer

- Developed an interactive Chef helper app on Unity using Eleven Labs API. Chef Qailo is an AI chef assistance app when you chat with a Chef avatar who helps people in the kitchen to deliver flawless cuisines
- **Technologies**: Unity, Eleven Labs, C#, WebSockets
- ChefQailo App - App Store

BigStakes5 Dominoes Game — Lead Unity Developer

- Developed a fast-paced, multiplayer dominoes game blending skill-based gameplay and poker mechanics, with in-game currency and transparent scoring.
- **Technologies**: Unity, Nakama, C#, Skillz
- Big Stakes 5 - Dominoes Game - Download

Sound Storm — Unity Developer

- Medical diagnostic and rehabilitation app for audio-impaired patients. Implemented audio processing, quiz mechanics, and automated patient progress reporting synced to backend servers via GraphQL.
- **Technologies**: Unity, C#, Cursor, Github, Rest API, GraphQL
- Sound Storm - Apps on Google Play

DGA Card Web AR — Unity Developer

- Using WebAR on AR foundation, developed this commercially used Web app using Unity and AR foundation. The app scans a special card and upon scanning, an invitational hologram appears on the top of card in AR space
- **Technologies**: Unity, C#, AR foundation, Web GL, Web AR
- DGA card.mp4 - Demo video

Mojaz Car Insurance Walkthrough — Unity Developer

- Using Unity engine, made this demo walkthrough of how to use Mojaz car insurance app for a middle eastern client. This app has interactive UI elements for any layman to fully understand how to apply and get their vehicle insured and recovered across the screening sessions
- **Technologies**: Unity, C#, RTL TMP, DoTween
- Mojaz Unity App - Demo

AR Alphabet — Volunteer Unity Developer

- Developed full-stack features including AR Foundation, ARKit integration, and Addressable asset streaming.
- **Technologies**: Unity, C#, Cursor, Github, Addressables, AR foundation, AR Kit
- Demo Video

Mob Control — Unity Developer

- Developed playable ads and playable prototypes using Unity Playworks and WebGL for Voodoo's hit hyper-casual title, *Mob Control*.
- Optimized WebGL asset bundles and runtime rendering performance to meet strict lightweight ad network requirements (under 5MB asset targets).
- **Technologies:** Unity, C#, Unity Playworks, WebGL
- WebGL Demo

Visit Saudi Metaverse — Unity Developer

- Developed an immersive Saudi heritage simulator. This app gives experience to any player who wants to visit past, future and present heritage of Saudi culture and infrastructure. The app gives sequential visits from Past all the way to Future using 3rd person avatar controls.
- **Technologies:** Unity, C#, Restful API, RTL TMP, Third person controller
- VSM Walkthrough - Demo

Donny Thump — Unity Developer

- Top-down competitive casual mobile game featuring real-life scoreboard rewards. Integrated REST APIs, WebGL, Google AdMob, and Firebase notifications for tournament releases.
- **Technologies**: Unity, C#, Rest API, WebGL, Swift, Xcode, Google Admob, Firebase notifications
- Donny Thump - Apps on Google Play
- Donny Thump - Apps on App Store

SQRRRL — Unity Developer

- Win real life rewards as well as more opportunities to play! SQRRRL is the tournament releases designed to offer more than just on-screen prizes for skillful players. Part of the Prize Miner family of games
- **Technologies**: Unity, C#, Rest API, WebGL, Swift, Xcode, Google Admob, Firebase notifications
- SQRRRL - Apps on Google Play

Slinky Ride — Unity Developer

- Developed this open-source hyper casual prototype by implementing dynamic level editor. Player can make a level using the level editor and engage to play it with core gameplay mechanics
- **Technologies**: Unity, C#, Scriptable Objects
- SlinkyRide - Level and Gameplay Demo
- ZakriyaAmir/SlinkyRide: Github Repo
- slinkyRide.apk - Google Drive

TECHNICAL SKILLS

- **Game Development**: Unity 3D/2D (C#, AR, XR, Multiplayer, Physics Simulation, AI, Procedural Generation, Gameplay Systems).
- **System and Architecture Design**: Scalable architecture, modular systems, and efficient pipelines using Addressables and ScriptableObjects.
- **Optimization:** Gameplay, network, rendering, and memory optimization; ANR resolution; performance profiling and debugging for mobile, PC, and WebGL platforms.
- **Multiplayer Systems:** Net Code design and implementation, matchmaking, and server-client architecture.
- **Platform Expertise**: Cross-platform development (Android, iOS, WebGL, PC/MAC, Consoles).
- **Backend Integration**: WebSockets, RESTful APIs, and third-party SDKs (Firebase, AWS S3, AdMob).
- **Tools and Pipeline Development**: Custom tool creation for workflows, runtime UI systems, and admin tools.
- **Version Control**: Git, GitHub, PlasticSCM.
- **Project Management**: JIRA, Trello, ClickUp for task and team management.

Soft Skills

- **Leadership and Mentorship:** Training and mentoring developers, conducting technical reviews, and fostering a collaborative work environment.
- **Production Oversight:** Resource allocation, performance tracking, and ensuring timely delivery of projects.
- **Problem-Solving:** Effective debugging, glitch resolution, and critical thinking to address complex technical challenges.
- **Communication and Coordination:** Strong interpersonal skills for client interaction, team collaboration, and cross-departmental communication.
- **Process Improvement:** Streamlining workflows, reporting design processes, and implementing performance enhancements.
